                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CATTATCTAGGACTTGCAAATAAGAATGTTAAAGATGCTATGGCTAAAATCCAAGCAAAA 3549
                                                                                                 The present sequence is that of cDNA encoding human NOGO-A (see AAB82349). NOGO-A is a previously known splice variant of the human NOGO pane on chromosome 2p21. NOGO-A cDNA was obtained by CFR amplification of human spinal cord cDNA. The invention relates to a novel splice variant, NOGO-C (see AAF90323). It provides NOGO-C polypeptides and polymuclectides, and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polymuclectides in the treatment of diseases including neuropathies, spinal injury, brain injury, stroke, neuronal degeneration, for example Althemer's disease and Parkinson's disease, neuromuscular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE polypeptides capable of binding with each other, monitoring the interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating acute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas), hyperpoliferative or dysproliferative disorders (e.g. neuroblastomas), hyperpoliferative, or dysproliferative disorders (e.g. cirrhosis, psoriasis, keloid formation, fibrocystic conditions, tissue hypertrophy) of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may be useful in treating Nogo-associated diseases. The modulators of Nogo or BACE polypeptides, and the polynucleotide encoding the BACE polypeptide are useful in manufacturing a medicament for the treatment or prevention of disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          responsive to the modulation of Nogo activity, in alleviating the symptoms or improving the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying modulators of Nogo or BACE activity for treating acute neuronal injuries, neoplastic or dysproliferative disorders, comprises providing and monitoring interaction between Nogo and BACE polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of a cancer. The polynucleotide may also be an essential component in assays, a probe, in recombinant protein synthesis, and in gene therapy techniques. The present nucleic acid sequence encodes the human NogoA

The invention relates to promoting nerve regeneration or conferring neuroprotection and preventing or inhibiting neuronal degeneration in the central/peripheral nervous system (NS). The method involves administering (NS specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system (Trauma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or camages caused by surgery such as tumour excision. The disease is not autoimmune disease or neoplasm. The disease results in a degenerative conditionate demential and penetral sclerosis, non-arteritic optic neuropathy, and disease, facial nerve (Bell's) palsy, glaucoma, Huntington's chorea, anyotrophic lateral sclerosis, non-arteritic optic neuropathy, and vitamin deficiency, intervertebral diseases, including but not limited to uremia, porphyria, hypoglycemia, Sjorgen Larsson syndrome, peripheral compathy, chronic ataxic neuropathy, bilary cirrhosis, primary anyloidosis, obstructive lung diseases, acromegaly, malabsorption syndrome, polycythemia vera, immunoglobulin [IG)A- and IGG gamma- compathies, complications of various diseases, including but not limited to uremia, porphyria, hypoglycemia, Sjorgen Larsson syndrome, peripheral compathy, chronic ataxic neuropathy, bilary cirrhosis, primary anyloidosis, obstructive lung diseases, acromegaly, malabsorption syndromes, polycythemia vera, immunoglobulin [IG)A- and IGG gamma- compathy, disease, relangectasia, primary adrenomyeloneuropathy, Giant axonal neuropathy, and sisease, Fabry's disease, or lipoproteinemia. The present sequence represents a DNA and example of NS-specific antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Promoting nerve regeneration and preventing neuronal degeneration in the central/peripheral nervous system from injury/disease, comprises administering nervous system-specific activated T cells/antigen, or analogs/peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SerLeuPheLeuLeuLeuSerLeuThrValPheSerIleValSerValThrAlaTyrIle 40

cc fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene in an expression of the gene in an expression of the gene in an expression of the gene in an expression of the gene in an expression of the gene collamnia a subject with the agent and identifying fat cell number or size in the subject. The agent comprises an antisense coligonucleotide. The subject. The agent comprises an antisense coligonucleotide to the agent, detecting binding of the agent to the polypeptide to the agent, detecting binding of the agent to the collypeptide to a change in an activity of the polypeptide, treating a subject with the agent and identifying fat cell number or size in the cumber or size comprises an antibody. A method of regulating fat cell subject number or size or number of a gent that changes the expression of a gene, and treating the subject containing fat cells and an agent that changes the expression of a gene, and treating the subject containing the subject con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3130 GCCTTGGCCCTGCTCTCTGTGACCATCAGCTTTAGGATATACAAGGGTGTGATCCAAGCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a myelin-associated glycoprotein (MAG)

derivative comprising a mutation in or flanking MAG Ig-like domain 5

(Igd5), excluding the MAG derivative MAG (d1-3)-Fc, where the mutation
reduces or eliminates the ability of the derivative to regulate neurite
cutgrowth as compared to endogenous or soluble MAG without eliminating
promoting to neuronal surfaces. The inhibitors of MAG are useful for
promoting neural degeneration associated with injuries, disorders, or
treating neural degeneration associated with injuries, disorders, or
cliseases. The disorder, disease, or condition is associated with
apoptosis or results from a demyelinating disease and includes
amylotrophic lateral sclerosis, Alzheimer's disease, Parkinson's disease,
Kuru, multiple system atrophy, amylotrophic lateral sclerosis (fou
Gehrig's disease), or progressive supranclear palsy. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New myelin-associated glycoprotein (MAG) derivative comprises a mutation in or flanking MAG Ig-like domain 5 (Igd5), excluding the MAG derivative MAG (d1-3)-Fc, useful promoting neural growth and regeneration.
                                                                                                        se; gene; human; myelin-associated glycoprotein; MAG; neural growth; neural regeneration; apoptosis; amylotrophic lateral sclerosis; Alzheimer's disease; Parkinson's disease; Huntington's disease; multiple sclerosis; Creutzfeldt-Jacob disease; kuru; multiple system atrophy; Lou Gehrig's disease; progressive supranuclear palsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              C; 812 G; 890 T; 0 U; 0 Other;

dictivity are used in the treatment of nepplastry discusse of the treatment of nepplastry discussed of the treatment of nepplastry discussed on the treatment of pinealowa, haemangioblastoma, acoustic neuroma, oligodendroglioma, pinealoma, haemangioblastoma acoustic neuroma, oligodendroglioma, neuroblastroma or retinoblastroma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benjand dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or component plasticity of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in disquestive or desired for predisposition of disorders and to screen for or test molecules which can treat or provent disorders or diseases of the CNS. Note: SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO. 29 in disclosure of the specification. However the specification does not include sequences for
                                                                                                                                                                                                                                                                                 The present sequence is a cDNA encoding bovine Nogo protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. The present sequence was obtained from bovine spinal cord white matter CDNA library. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g.
                                                                                                                                             yo proteins and nucleic acids useful for treating neoplastic disorders the central nervous system and inducing regeneration of neurons.
                                                                                                                                                                                                                                   Claim 26; Fig 12; 122pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           these SEQ ID numbers

The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 623-640 with a dissociation constant of less than 1000nM. Also described. (1) a polynucleotide encoding the binding molecule; (2) an expression vector or system comprising the polynucleotide; (3) a host cell comprising the binding molecule and a carrier or diluent; and (5) treating diseases associated with nerve repair. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present sequence encodes human NogoA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New binding molecule that binds to the human NogoA polypeptide, NiG, NiG-D20 or NogoA623-640, useful in preparing a composition for treating CNS injury or neurodegenerative disorders.
                                                                                                                                                                                                                                                                                                                                                     binding molecule; human; NogoA; NiG; NiG-D20; NogoA_623-640;

                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence (Genbank accession number AB0202693) encodes the human Nogo protein, a 250kDa myelin-associated axon growth inhibitor. The invention relates to the use of the nogo receptor, nogo protein, their nucleic acids, vectors expressing them and antibodies against them, to isolate agents which block nogo receptor mediated axonal growth. The agent is useful for treating a central nervous system disorder which is a result of randal or cerebral trauma, spinal cord injury, stroke or a demyelinating disease selected from multiple sclerosis, monophasis demyelination, encephalomyelitis, multifocal leukoencephalopathy, panencephalitis, Marchiafava-Bignami disease, pontine myelinolysis, adrenoleukodystrophy, Palizaeus-Merzbacher disease, Spongy degeneration, viral infection and Krabbe's disease, metachromatic leukodystrophy, viral infection and Krabbe's disease
                                                                                                                                                                                                                                                                                                                                                       Novel Nogo receptor protein useful for identifying modulator of Nogo protein or Nogo receptor protein, which is useful for treating central nervous system disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IleGlnLysSerAspGluGlyHisProPheArgAlaTyrLeuGluSerGluValAlaIle

axonal growth by a central nervous system (CNS) neuron. The NgR polypeptide or an agent inhibits the binding of Nogo to NgR or NgR-dependent signal transduction in the central nervous system neuron may bused in treating central nervous system flasses, disorder or injury, egpinal cord injury. Expression of an NgR protein may be associated with inhibition of axonal regeneration following cranial, cerebral or spinal trauma, stroke or a demyelinating disease, such as multiple sclerosis, monophasic demyelination, encephalomyelitis, multifocal leukoencephalopathy, panencephalitis, or Krabbe's disease. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3204 AGCCTATTCCTGCTGCTTTCATTGACAGTATTCAGCATTGTGAGCGTAACAGCCTACATT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                           3563
                                                                                                                                                                                                                     The invention relates to a novel nucleic acid encoding a polypeptide comprising amino acid residues 27-309 of a 473 amino acid sequence (Pl, human Nogo receptor (NgR) NTLRRCT domain), or residues 27-309 of Pl with 1-20 conservative amino acid substitutions, and less than a complete CTS domain, provided that a partial CTS domain, if present, consists of no more than the first 39 consecutive residues. The nucleic acid of the invention has neuroprotective activity. The polymucleotide may have a use in gene therapy. The nucleic acid is useful for decreasing inhibition of

                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relate to a method of diagnosing (M1) non-blood disease such as solid tumor by providing peripheral blood sample of human having non-blood disease, and comparing an expression profile of specific genes in the peripheral blood sample to reference expression profile of the genes, where each of the genes is differentially expressed in peripheral blood mononuclear cells (PBMCs) of patients having the disease as compared to PBMCs of normal humans. The method is useful for diagnosing non-blood disease such as solid tumor. The solid tumor is chosen from renal cell carcinoma (RCC), prostate cancer and head/neck cancer. The peripheral blood sample comprises enriched PBMCs. The peripheral blood sample (claimed) (M1) is useful for identifying sample is a whole blood sample (claimed) (M1) is useful for identifying genes that are differentially expressed in peripheral blood samples is loolated at differentially expressed in peripheral blood samples (CC) and/or other solid tumors. This sequence corresponds to a gene that is fiferentially expressed and detected by the method of the invention. (Note: this sequence is not given as part of the printed specification (NCC) but was obtained from WIPO in electronic format at

The invention relates to 40 human secreted proteins (AAY94981-795020),
and cDNA sequences encoding them (AAA23423-A23462). The secreted proteins
confine invention include those that are thought to be only partially
secreted, i.e., transmembrane proteins. The proteins of the invention may
cativity; cell proliferation; differentiation; immune modulation;
haematopoiesis regulation; tissue growth activity; activin/inhibin
activity; chemotactic/chemokinetic activity; activity/inhibin
activity; chemotactic/chemokinetic activity; haemostatic and thrombolytic
activity; anti-inflammatory activity; and tumnour inhibition activity. The
proteins may be administered to patients as vaccines, and the nucleotides
may be treated using the proteins or nucleotides of the invention include
autoimmune diseases; genetic disorders; haemophila; cardiovascular
diseases; cancer; bacterial, fungal and viral infections, especially HIV;
cuillain-Barre syndrome; insulin dependent diabetes mellitus; and
allergic reactions such as asthma and anaemia. They may also be used for
treating wounds, burns, ulcers, osteoporosis, osteoarthritis, periodontal
diseases Alzheimer's disease, Parkinson's disease
and amyotrophic lateral sclerosis (ALS). Proteins with activin/inhibin
sequences of the invention may be used in chromosome mapping, and as a
source of diagnostic primers and probes. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3219
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3279
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3339
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ATCCAGAAATCAGATGAAGGCCACCCATTCAGGGCATATCTGGAATCTGAAGTTGCTATA 3399

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences that hybridize to (a), under moderately to (a); or (f) degenerate variants of (a). Polypeptides (ABF68596-ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting and stimulating and immune response. The polynucleotides cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotide and pancreatic tumor polypeptides, useful idiagnosing, preventing and/or treating cancer, particularly pancreatic

This invention relates to novel methods for diagnosing and monitoring autoimmune and chronic inflammatory diseases. Specifically, it refers to autoimmune and chronic inflammatory diseases. Specifically, it refers to the identification of genes that have a clinical utility as diagnostic tools for the management of, in particular, patients with systemic lupus erythematosis (SLE) or rheumatoid arthritis (RA). Accordingly, the present invention describes a method for determining the levels of multiple differentially expressed genes of a patient, in a concerted manner, in order to achieve an improved diagnostic assay with sensitivity and specificity for the disease in question. As such, these genes are useful for the diagnosis of various other inflammatory disorders including cholecystitis, Sjogren's disease, CREST syndrome, scleroderma, anylosing spondylitis, ulcerative colitis, primary sclerosing cholangitis, appendicitis, diverticulitis, and primary biliary sclerosis. This polynucleotide is a DNA sequence representing human mRNA that is differentially expressed in patients with SLE, used in an exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3151 rcacircricaccrccrcraracadadacarraadaacacregagregrerricarecc 3210

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, ceteopathic, cytostatic, anti-HIV, haemostatic, nephrotropic, antipanemic, antipsoriatic and hepatotropic activity. The polynucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polynucleotides are particularly useful for diagnosing, treating or preventing cell particularly useful for diagnosing, treating or preventing cell consistence (e.g. cancers including adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's disease, acquired immunodeficiency syndrome (ALDS), Goodpasture's syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis. ABX34440-ABX34835 encode the MDDT polypeptides represented in ABU11450-ABU11845, described in the disclosure of the invention. NOTE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TIGATGTGGGTATTTACCTATGTTGGTGCCTTGTTTAATGGTCTGACACTACTGATTTTG 3574

This invention relates to a novel method for modulating the expression of a target gene in a cell. Specifically, it refers to the introduction into a cell of a polynucleotide that forms a duplex region with an mRNA transcribed from the target gene, where the duplex region omprises a mammalian miRNA target region i.e. a non-coding microRNA (miRNA) that regulates mRNA at a post-transcriptional level. The present invention describes a method for controlling ontogenesis of a mammal, function of a mammalian cell in the post-transcriptional phase, which comprises introducing a plasmid vector comprising a promoter and nucleic acid molecule expressing an miRNA or siRNA silencing precursor to the miRNA. Accordingly, it provides a cell therapy method for treating cancer, immune disease, nerve disorder. (e.g. amyotrophic lateral sclerosis, Parkinson's disease, or Alzheimer's disease) or an inflammatory disease. The miRNA or the plasmid vector. As such, they can be developed into the cell that exhibit cytostatic, immunosuppressive, parkmaneral compositions that exhibit cytostatic, immunosuppressive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modulating expression of a target gene in a cell, for treating cancer, an immune disease, or a nerve disorder, comprises introducing into the cell a polynucleotide that forms a duplex region with an mRNA transcribed from

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing a change in expression of the gene crelative to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent and identifying fat cell number or size in the subject. The agent comprises an antisense consprises providing a polypeptide and an agent, exposing the oligonucleotide. The subject comprises an ammal, preferably a human. The conjoquelocide ide agent, detecting binding of the agent to the agent, detecting binding of the agent to the agent comprises an antibody. A method of regulating a subject or a change in an activity of the polypeptide, treating a collippeptide or a change in an activity of the polypeptide, treating a comprises providing a subject containing fat cell number or size comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the subject is altered. The method is useful for identifying compounds that influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents

AAB64471 to AAB64548 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: antiarthritic; immunosuppressive; antirheumatic; antiproliferative;
                                                                                                                                                                                                                                                                  139

repropretedive; antibacterial; virtucide; fungicide; and opticality; carbonic processions and polymerical; carbonic condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arbhritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arreet, cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithalial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. AAR32690 to AAR32698 and AAB64421 represent sequences used in the exemplification of the present

NOCO-C is a novel splice variant of the human NOCO-B, have bromosome 2p21. 2 Other splice variants, NOCO-A and NOCO-B, have previously been identified. The invention provides NOCO-C polypeptides and polymocleotides. and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOCO-C polypeptides and polymucleotides in the treatment of diseases including neuropathies, spinal injury, brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and Parkinson's disease, neuromuscular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions associated with NOCO-C imbalance, and diagnostic assays for detecting diseases associated with inappropriate NOCO-C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21

This sequence encodes a human neuroendocrine-specific protein-like protein (NSPLP) of the invention. Recombinant cells transformed with the DNA are used to express the NSPLP proteins, which are used to treat cancer and neurodegenerative diseases such as amyotrophic lateral sclerosis. Also antisense nucleic acids and antagonists of NSPLP can be used to inhibit activity of the NSPLP proteins. Antibodies specific for used to inhibit activity of the NSPLP proteins. Antibodies specific for NSPLP are used for disgnosis and monitoring treatment of diseases associated with NSPLP expression, in usual immunoassays, and to isolate NSPLP from natural sources. The NSPLP proteins, or their fragments can also be used in drug screening to identify NSPLP antagonists. The nucleic acid can be used diagnostically and for monitoring treatment (in hybridisation or amplification assays); to isolate closely related sequences; in gene therapy for both sense and antisense applications (including use of ribozymes) and for mapping the natural genomic sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 141

The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleoited is also useful for chromosome localization and for tissue expression studies. The present sequence represents a DNA encoding the human MAGI protein variant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        975
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           915
                                                                                                                                                                                                   The present sequence is that of cDNA encoding human NOGO-B (see AABB2350). NOGO-B is a previously known splice variant of the human NOGO gene on chromosome 2p21. The invention relates to a novel NOGO gene splice variant, NOGO-C (see AAF90323). It provides NOGO-C polypeptides and polynucleotides, and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polynucleotides in the treatment of diseases including neuropathies, spinal injury, brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and Parkinson's disease, neuromuscular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions associated with NOGO-C imbalance, and disgnostic assessing to the seaso associated with inappropriate NOGO-C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              675

```
This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX04302) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAX04311-X04410; amino acid sequences AAW78126-W78225) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therappy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypurcleotides. Specific uses are described for each of the linker and the last are most highly expressed in (see AAX04311 for described uses)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  547
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      607

The invention relates to human RTN4B protein and coding sequence, useful for providing a cDNA sequence of human RTN4B. The protein is an isomer of RTN4 with RTN family members. The present invention also refers to polypeptide encoded by a nucleotide sequence and manufacturing method and application of the polypeptide and polypucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               619
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         619

The products of the invention have cytostatic, neuroprotective, immunosuppressive, antirheumatic, antiarthritic, dermatological, antiinflammatory, hepatotropic, virucide, nootropic, anticonvulsant, antiparkinsonian, vasotropic, cerebroprotective and antialcoholic activity and can be used for gene
                                                                                                      141
                                                                                                                                                                         161
                                                                                                                                                                                                                                            181

therapy. The polynucleotides also related vectors, hosts (or their extracts), encoded polypeptide (or their receptors) and/or agents that inhibit their activity (including antisense sequences) are used for treatment or prevention of tunnours, autoimmune or degenerative diseases and viral infections, specifically leukaemia, carcinoma, sarcoma, multiple sclerosis, rhemmatoid arthritis, diabetes, lupus, or infection with hepatitis or influenza viruses, Alzheimer's, Huntington's or Parkinson's disease, reperfusion injury, stroke and alcoholic liver disease. Detection of the polymelectides and derived polypeptides can also be used for diagnosis of these diseases. This sequence encodes an apoptosis-associated protein described in the disclosure of the

AAZJ6228-49 encode bone marrow secreted proteins of human bone marrow stromal cells. The proteins can exhibit cytokine, cell proliferation, or cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells or factor-dependent cell lines, to regulate hematopoiesis, and to treat myeloid or lymphoid cell lines, to regulate hematopoiesis, and to treat myeloid or lymphoid cell lines, to regulate hematopoiesis, and to treat well and proliferation of erythroid progenitor cells, and to treat various anaemias. They can have colony stimulating factor (GSF) activity and can be used to support the growth and proliferation of myeloid cells such as granulocytes, monocytes or macrophages, to prevent or treat myelo.

C suppression, to support the growth and proliferation of megakaryocytes and platelets, thereby allowing prevention or treatment of platelet disorders such as thrombocytopenia, to support the growth and proliferation of hematopoeitic stem cells, either in place of or in proliferation of hematopoeitic stem cells, either in place of or in proliferation of hematopoeitic stem cells, either in place of or in coppulate the stem cell compartment after irradiation or chemocherapy. They can be used for growth or differentiation of bone, cartilage, tendon, ligament, or nerve tissue, as well as for wound healing and tissue repair and replacement, and in the treatment of burns, incisions and ulcers, to induce cartilage and/or bone growth in circumstances where bone is not normally formed and thus have an application in healing bone fractures and cartilage canduck an application in healing bone fractures.
                                        Bone marrow secreted protein; bone marrow stromal cell; cytokine; cell proliferation; cell differentiation; hematopoiesis; anaemia; myeloid cell deficiency; lymphoid cell deficiency; myeloid cell; erythroid progenitor cell; colony stimulating factor; granulocyte; monocyte; macrophage; myelo: colony stimulating factor; granulocyte; platelet disorder; thrombocytopenia; hematopoeitic stem cell; stem cell disorder; aplastic anaemia; bone differentiation; paroxysmal nocturnal hemoglobinuria; bone growth; cartilage; tendon; ligament; nerve; wound healing; tissue repair; burn; incision; ulcer; bone fracture; cartilage damage; artificial joint; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated human polynucleotide and secreted proteins can induce production of other cytokines in certain cell populations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 reduction and also in the improved fixation of artificial joints
cDNA encoding a bone marrow secreted protein designated BMS112.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1610 BP; 354 A; 458 C; 426 G; 372 T; 0 U; 0 Other;

The invention relates to a method of detecting an autoimmune disorder in a subject comprising obtaining a biological sample, preferably a peripheral blood monourclear cell, from a subject, determining expression levels of at least two genes in the biological sample, and comparing the expression level of aach gene determined with a standard, where the comparison detects the presence of an autoimmune disorder in the subject. The method is useful for detecting or diagnosing an autoimmune disorder, e.g. rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis, or type 1 (insulin-dependent) diabetes. The present sequence therease.
                                                                                                         Detecting an autoimmune disorder in a subject comprising comparing the expression level of each gene determined with a standard, where the comparing detects the presence of an autoimmune disorder in the subject.
                                                                                                                                                                                              Claim 10; SEQ ID NO 62; 86pp; English.

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE polypeptides, and determining if the test agent interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating caute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas, portains), hyperproliferative or dysproliferative disorders (e.g. cirrhosis, psoriais, Reloid formation, fibrocystic conditions, tissue hypertrophy) of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may be useful in treating Nogo-associated diseases the modulators of Nogo or BACE polypeptides, and the polynucleotide encoding the BACE polypeptide are useful in creaning a medicament for the treatment or prevention of disorders responsive to the modulation of Nogo activity, in alleviating the symptoms or improving the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading of a cancer. The polymucleotide may also be an essential component in assays, a probe, in recombinant protein synthesis, and in gene therapy recombiques. The present nucleic acid sequence encodes the human NogoB of the invention

The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (c) sequences consisting of at least 20 contiguous centidates of (a); (d) sequences consisting of at least 20 contiguous stringent conditions; (e) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a). Polypeptides (ABR68596. ABR68596. Consequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a). Polypeptides (ABR68596. Concern in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating panceatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           936
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 756

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a human stress-phosphorylated endoplasmic reticulum protein, designated Nogo B. Nogo B has cytostatic activity and is a modulator of the storage and exchange of calcium, cell growth and cellular stress response. It can: regulate oxidative stress; inhibit neurite outgrowth, neuron growth and axon regeneration. Nogo B polypeptides and polynucleotides are useful for modulating stress levels and cellular stress-response, cell growth and viability, diagnosis and treatment of cancer, malignant growth and other Nogo B related diseases. Nogo B polypeptides are also useful to screen combinatorial libraries to identify agonist or antegonist. Antibodies against Nogo B polypeptides are useful for affinity chromatography and distinguishing Nogo B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            788 grigingaccricifarcricadadacarriaadaacarcricaagricarrigerercage 847

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .028 GAGGAGTTGGTTCAGAAGTACAGTAATTCTGCTCTTGGTCATGTGAACTGCACGATAAAG 1087
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5' - and 3' -ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the CDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               101

The invention relates to human cDNA sequences that encode human secreted proteins. The invention also relates to an antibody that specifically binds to a polypeptide of the invention and amethod of binding the bingspeptide to an antibody. The polymucleotides are useful for expressing the entire secreted proteins which they encode and for distinguishing human tissues and cells, and for distinguishing between human tissues and cells, and for calls from non-human clels that do or do not express the polymucleotides comprising the cDNAs. The polymucleotides and conceptions are useful in Grensic procedures or diagnostic procedures to identify individuals with genetic diseases resulting from abnormal expression of the genes corresponding to the cDNAs. The sequences are also useful in gene therapy to control or treat genetic diseases. This sequence represents a human secreted polymucleotide of the invention. Note: The sequence data for this patent did not form part of the printed segment of the printed segment of the printed segment.

The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may or can synchines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoiesis regulators, tissue growth regulators, regulators of reproductive hormones or cell movement tumour inhibition activity. The DMAS passed in forensic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify the passed or cellular procedures to identify individuals or in diagnostic procedures to identify constructing a high resolution map of the human chromosomes. They constructing a high resolution map of the human chromosomes. They can also be used for gene therapy to control or treat genetic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        101

The invention relates to a composition comprising a plurality of CDNAs for detecting the altered expression of genes in an immunological cordetecting the altered expression of genes in an immunological cordetecting the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the invention of pan immunopathological condition in a sample, conditions to form one or more hybridisation complexes and comparising the plurality of cDNAs under conditions to form one or more hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a method for identifying a plurality of polynucleotide probes. The cnontoxing the expression of target polynucleotides. The microarray for monitoring the expression of target polynucleotides. The microarray for monitoring the expression of target polynucleotides. The microarray for monitoring culcerative colitis, hypercosinophilia, irritable bowel syndrome, culcerative colitis, hypercosinophilia, irritable bowel syndrome, culcerative colitis, hypercosinophilia, irritable for some syndrome, carcinogenicity studies, forensics or pharmacogenomics. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition of may also be used in purification of a subpopulation of may also be used in purification of a subpopulation of may also be used in purification of a subpopulation of may also be used in purification of a subpopulation of form to term the printed specification but was obtained in electronic format directly format directly format directly formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTTGTTGACCTCCTCTGACTCGAGACATTAAGAAGACTGGAGTGGTTTTGGTGCCAGC 1370
